

# Coin Flipper

- Word problem:
  - Write the Pseudocode and construct a flow chart for the following program:
    - Ask the user “How many coin flips?”
    - Flip a coin the requested number of times. You can put “`coin = random(0,1)`” in a process box to mean “Get a random number, either zero or one”. Then use one result for heads and the other for tails.
    - Display the results, something like:
      - Coin flips: 50
      - Heads: 27
      - Tails: 23
